Education

•Southeast University, Nanjing, China *Sept. 2018-June. 2022*
B.E. in Highway and Bridge Engineering, School of Transportation GPA: 90/100

•National University of Singapore, Singapore *Sept. 2021-May. 2022*
A one-year joint training program between National University of Singapore and Southeast University

•The Hong Kong University of Science and Technology (HKUST), Hong Kong *Sept. 2022-June. 2023*
MSc in Data-driven Modeling, School of Science CGPA: 4.02/4.3 Percentage: 10%

•Main Courses: Statistical Machine Learning(A+), Stochastic Processes and Applications(A), Deep Learning for Modeling: Concepts, Tools, and Techniques(A+)

Publication and Preprints

- Xiao, R., Wan, Z., & Xiang, Y. (2023). *Gaei-unet: Global attention and elastic interaction u-net for vessel image segmentation.* (The article is submitted to BIBM 2023 and is under review. **link**)

Research Interest

- Medical image segmentation, computer vision, and machine learning
- Large-scale multi-modality biomedical image data integration for more precise medical analysis

Research Experience

•Medical Image Segmentation using Active Contour and Deep Learning Methods *Hong Kong SAR*
Project Leader – Supervised by Prof. Yang Xiang Sept. 2022-June. 2023

– Designed and implemented a novel image segmentation approach by integrating unique active contour methods – elastic interaction-based method with the U-shape deep learning framework.
– Proposed an attention module to leverage spatial and channel context information to enhance high-level semantic understanding, prompting thin structure segmentation accuracy and efficiency.
– Focused on applications in medical imaging, contributing to improved diagnosis and treatment planning.
– The article **GAEI-UNet: Global Attention and Elastic Interaction U-Net for Vessel Image Segmentation** is submitted to BIBM 2023.

•The Detection of Apparent Cracks in Bridges Using Computer Vision *Nanjing, China*
Project Leader – Supervised by Prof. Yanjie Zhu Aug. 2021-Jun. 2022

– Developed a deep learning model using YOLOv5's image recognition algorithm to detect and analyze cracks in bridge structures.
– Implemented lens distortion correction and orthogonal projection methods to quantify the identified cracks accurately.
– An article in process of modifying: **YOLOv5s-GTB: light-weighted and improved YOLOv5s for bridge crack detection**.

•Automated Road Information Extraction Based on Laser Scanning Point Cloud *Nanjing, China*
Project Leader – Supervised by Prof. Bin Yu Aug. 2020-Aug. 2021

– Utilized machine learning techniques to extract road level data sets, contributing to urban planning and development.
– Innovated a linear index-based segmentation strategy for efficient point cloud data processing.
– Addressed noise issues through data refinement, enhancing the accuracy of surface segmentation.

•Vehicle Dispatching Considering User Preference Based on Reinforcement Learning *Singapore*
Project Leader – Supervised by Prof. Yang Liu Aug. 2021- May. 2022

– Led a team to analyze NYC taxi data, studying user behavior preferences for carpooling platforms.
– Developed and tested incentive strategies using multi-agent reinforcement learning, maximizing platform efficiency and user satisfaction.
– Implemented a deep Q-network-based ordered allocation system, contributing to the field of intelligent transportation systems.

Honours and Awards

- Honours: Subot Scholarships (2021-2022) (top 1 out of 95), Outstanding Graduate of Southeast University(2022)
- Awards: First Prize of Jiangsu Student Transportation Technology Competition (2021) (top 6 out of 122), The Second Prize Contemporary Undergraduate Mathematical Contest in Modeling (2020)

Working Experience

•**Hong Kong Center for Construction Robotics (HKCRC)** *Hong Kong*

Research Intern Sep. 2022-Jan. 2023

– Conducted comprehensive data collection and organization, tracking the latest trends and technologies in the Hong Kong construction industry.

– Developed strategic plans for implementing robotics, focusing on the digitalization of construction sites, with potential applications in medical and structural imaging.

Technical Skills and Interests

Languages: C/C++, Python, LaTeX
Technical: Pytorch, Git, Linux, Tensorflow, Matlab
Specialized Skills: Medical Image Analysis, Deep Learning, Computer Vision, Active Contour Methods
Libraries : C++ STL, Python Libraries, CUDA Libraries
Soft Skills: Problem Solving, Self-learning, Presentation, Adaptability
